

9th INTRODUCTION TO EUCLID'S GEOMETRY

Solve each of the following question using appropriate Euclid's axiom :

1. Two salesmen make equal sales during the month of August. In September, each salesman doubles his sale of the month of August. Compare their sales in September.
2. It is known that $x + y = 10$ and that $x = z$. Show that $z + y = 10$?
3. Look at the Fig. 5.3. Show that length $AH >$ sum of lengths of $AB + BC + CD$

4. In a triangle ABC , x and y are point on AB and AC such that $AB = BC$, $BX = BY$. Show that $AX = CY$.
5. In a triangle ABC we have X and Y are the mid-points of AC and BC and $AX = CY$. Show that $AB = BC$
6. 4. In a triangle ABC , x and y are point on AB and AC such that $BX = 1/2AB$ and $BY = 1/2 BC$ and $AB = BC$. Show that $BX = BY$

7. In the Fig. we have $\angle 1 = \angle 2$, $\angle 2 = \angle 3$. Show that $\angle 1 = \angle 3$.
8. In the Fig. we have $\angle 1 = \angle 3$ and $\angle 2 = \angle 4$. Show that $\angle A = \angle C$.
9. In the Fig. we have $\angle ABC = \angle ACB$, $\angle 3 = \angle 4$. Show that $\angle 1 = \angle 2$.

10. In the given fig. 5.10, we have $AC = DC$, $CB = CE$. Show that $AB = DE$.
